

Fantasy Tree Generator

Trunk Settings

Base Count: Changes the number of Curves on the trunk, useful for adding/removing branches and changing the style of the tree.

Tree Seed: Random seed of the overall trunk, changing this value changes the appearance of the whole tree

Trunk Resolution: Resolution of the tree along the curve.

Resolution: Resolution controlling the roundness of the curve.

Tree Distortion: Changes how much the tree is distorted.

Distortion roughness: Change the roughness of the distortion.

Trunk noise: Change the noise vector for different distortions.

Branches settings

Angle Based: Split the branches based on defined angle, toggling off results in a branch split at every point.

Split Angle: Angle for splitting the branches

Branch Length: Length of the branches

Branch Count: Maximum number of branches to be split.

Branch Seed: Random seed for branch generation.

Leaves: Toggle Leaves on and off.

Leaves Block: Toggle blocking mesh underneath the leaves. Gives the effect of leaves being denser even at lower density.

Leaves Seed: Random seed for leaf generation.

Leaves Color: Color of the leaves.

Leaves Density: Density of the leaves.

Leaves Scale: Size of the leaves.

Laves Distort: Distort the distribution of the leaves. 0 is perfect spherical distribution.

Leaves noise: Change the noise vector for different distortions.

Vines: Toggle Vines on and off.

Vine Gravity: How low the vines can hang.

Vine Seed: Random seed for generating vines.
